1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/4/06 has been entered.
2. Claims 13 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 11-107,112 for the reasons set forth in the previous action.
3. Applicant's arguments filed 4/4/06 have been fully considered but they are not persuasive.
4. Applicant argues that JP '112 does not disclose the specific spacing between the strands of the mesh in order to support the pad so as to prevent collapse during the ire bonding process and has nothing to do with the clearly defined particular spacings claimed. However, JP '112 teaches optimizing the spacing the fibers in the weave in order to form a fabric having the desired strength. JP '112 teaches optimizing the weave density by making the spacing between the adjacent strands small so as to increase the accuracy and efficiency of circuit boards which employ the fiber glass cloths. Therefore, JP '112 teaches that the weave density is a result effective variable. This teaching would seem to be relevant to prevention of collapse as well as to the control of the expansion and contraction of the fabric during use. JP '112 teaches a relationship between spacing and strength, accuracy and efficiency. JP '112 does not have to disclose the exact claimed dimensions and spacings to render the instant

claims obvious, since the optimization of a recognized result effective variable is obvious. Since JP '112 teaches that the spacing is a result effective variable it would have been obvious to have optimized the spacing through the process of routine experimentation which resulted in the desired strength, accuracy and efficiency in circuit boards which comprise the woven glass cloths.
